WORK EXPERIENCE

Wilcon Depot, Inc — Dec 2025 - Present

Junior Systems Developer — *Libis, Quezon City*

- Specialized in **PHP, Laravel 7.x, Vue.js, MySQL, IndexedDB, and M3 API integrations**, building **scalable modules** within enterprise systems.
- Developed and integrated a Sales Mobility module **handling 5M+ inventory records** with **caching optimization**, **real-time backend validation**, **QR code generation**, and **offline-first support** using **IndexedDB**.
- Implemented dynamic Excel and PDF export functionality **capable of handling large datasets efficiently**, enabling users to generate structured reports on demand.
- Automated **multi-database report generation** across **three databases**, **eliminating manual configuration** and **enabling immediate system-wide deployment**.

Aboitiz Foods Group — Jan 2025 - Mar 2025

Software Developer Intern — *Bonifacio Global City, Taguig*

- Developed a customer-facing **web application** utilizing the **jQuery framework** to streamline payment request processing and improve overall user efficiency.
- Established a data pipeline with **Google Sheets** for real-time data persistence and connected the app with automated **Google Drive** integration for secure multi-file uploads.

Schneider Electric Philippines — Jun 2023 - Jul 2023

Digital Transformation Intern — *Rosario, Cavite*

- Developed the **User Interface (UI)** for a **3D truck container filler** using **Unity and C#**, enabling operators to visualize and optimize container box positioning.
- Contributed to the development and integration of core system functionalities, directly enhancing the overall **logistics efficiency** and operational flow.

PROJECT EXPERIENCE

Keynergy: Solenoid-Based Energy-Harvesting Mechanical Keyboard — Jan 2025 - May 2025

- Architected and deployed the **Internet of Things (IoT) data pipeline** in **Python** to efficiently capture and transmit key press inputs to a centralized cloud-based data for analysis.
- Developed a **Graphical User Interface (GUI)** in **C#** that provides a real-time, dynamic visual display of the incoming key press data, offering users instantaneous system feedback.
- Leveraged **Firebase** as the **real-time database** to ensure immediate data synchronization and low-latency communication between the IoT system and the GUI.
- Led the integration and testing phase for **all hardware-software connections**, guaranteeing system stability and high-fidelity data transfer across the entire stack.
